Exam 70-403: TS: System Center Virtual Machine Manager 2008, Configuring

Question: 1

You work in an international company which is named Wikigo. You are employed as the IT engineer. There're three System Center Virtual Machine Manager (SCVMM) 2008 servers in your company and you're in charge of server01. Now your company manager assigns a task to you that you have to enable Performance and Resource Optimization (PRO). Besides this, you have to install OpsMgr agents and configure Microsoft System Center Operations Manager (OpsMgr) 2007. You try to configure the OpsMgr connection from SCVMM but you get an error message, so what should you do to make sure that you can enable PRO tips?(choose more than one)

- A. In order to enable pro tips, you should install the Operations Console of OpsMgr on the SCVMM server.
- B. In order to enable pro tips, you should add the Virtual Machine Manager Servers group to the OpsMgr Administrators user role on the OpsMgr server.
- C. In order to enable pro tips, you should add the OpsMgr agent action account to the Administrator user role on the SCVMM server.
- D. In order to enable pro tips, you should install the Virtual Machine Manager Servers group to the OpsMgr Administrators user role on the OpsMgr server.

Answer: A, C

Question: 2

You work as an IT engineer in an international company. The network of your company consists of an internal network and a perimeter network. On the perimeter network there is a host you must manage, so first you install the VMM agent on the host, and then what should you do?

- A. In order to meet the requirement, you should copy the securityfile.txt file from the host to the SCVMM server.
- B. In order to meet the requirement, you should install a server certificate on the host.
- C. In order to meet the requirement, you should install a server certificate on the SCVMM server.
- D. In order to meet the requirement, you should copy the hosts file from the SCVMM server to the host.
- E. In order to meet the requirement, you should copy a server certificate on the SCVMM server.

Answer: A

Question: 3

You work as an IT engineer in an international company which is named Wikigo. There are many System Center Virtual Machine Manager (SCVMM) 2008 servers in the company and you are in charge of a server named server1 which is configured as a library server. A large number of files are added into the library share. According to the report of administrators, when they create new virtual machines, they have to wait for a quite long time and Server1 gives no response once per hour. In this case, the company manager asks you to solve this problem. You checked and found that you have to perform the configuration on server1 and ensure that the performance must improve when administrators create new virtual machines, also, new ISO files must be automatically added to the library, so what should you do to achieve this? (Choose more than one)

- A. In order to meet the requirement, you should set the default refresh interval for the library to 24.
- B. In order to meet the requirement, first you have to create a new library server, and then between the two library shares, distribute the existing files.
- C. In order to meet the requirement, first you have to create a new library server, and then between the two library servers, distribute the existing files.
- D. In order to meet the requirement, you should set the default refresh interval for the library to 0.

Answer: A, C

Question: 4

You work as an IT engineer in an international company which is named Wikigo. There are many System Center Virtual Machine Manager (SCVMM) 2008 servers in the company, and you are in charge of a server named server01. Server01 manages five hosts named A, B, C, D and E and each of them have several virtual machines configured. Now you attempt to perform reporting in System Center Virtual Machine Manager (SCVMM) 2008 server, which contains virtual machine information. In order to implement that, not only you have Microsoft System Center Operations Manager (OpsMgr) 2007 installed on the server, but also you have OpsMgr reporting server as well as Server Virtualization Management Pack for OpsMgr installed on the server. You must guarantee that you can see reports that contain virtual machine information on the server. In order to achieve this goal, what should you do?

- A. You should install VMM agent on all virtual machines.
- B. You should install opsMgr agent on the SCVMM server.
- C. You should install OpsMgr agent on all hosts.
- D. You should install VMM agent on the SCVMM server.
- E. You should install Server Virtualization Management Pack on the SCVMM server.

Answer: C**Question: 5**

You work as an IT engineer in an international company which is named Wikigo. You are mainly in charge of the network of your company. You have the VMM Administrator Console installed on a computer that runs Windows Vista Service Pack 1 (SP1). You are required to install the VMM Administrator Console on the computer, so before you install the VMM Administrator Console, which feature would you choose to install?

- A. The feature of windows PowerShell 1.0.
- B. The feature of internet Information Services (IIS).
- C. The feature of windows Process Activation Service.
- D. The feature of WMI SNMP Provider.
- E. The feature of Windows Vista Service Pack

Answer: A**Question: 6**

You work as an IT engineer in an international company which is named Wikigo. You are mainly in charge of the network of your company. Your network of your company consists of two servers, that is, Server01 and Host01. With the installation of System Center Virtual Machine Manager (SCVMM) 2008, Server01 runs Windows Server 2008 while Host01 runs Windows Server 2003 Service Pack 1 (SP1) with the installation of Microsoft Virtual Server 2005 R2. You plan to add Host01 as a new host on Server01 but the VMM agent fails to install. In order to make sure that Host01 can be added as a new host on Server01, which action would you perform?

- A. Configure Windows Server 2003 Service Pack 2 (SP2) for Host01.
- B. Configure Windows Remote Management for Host01.
- C. Operate the Migrate Virtual Machine Wizard from the VMM Administrator Console.
- D. Operate the Convert Virtual Machine Wizard from the VMM Administrator Console.

Answer: B**Question: 7**

You work as an IT engineer in an international company which is named Wikigo. There are many System Center Virtual Machine Manager (SCVMM) 2008 servers in the company, and you are in charge of a server named server01. With the use of Remote Desktop connection you operate Server01. Then a virtual machine named VM01 is created and it is connected by VMM Administrator Console. When you use VMM Administrator Console to connect to VM01, you will find that the mouse refuse to work. To be able to use the mouse when you use the VMM Administrator Console to connect to VM01,

Which option would you select?

- A. To install Virtual Guest Services on VM01 from the VMM Administrator Console.
- B. To delete the mouse and restart VM01 from Device Manager in VM01.
- C. To modify the Buttons settings from Mouse Properties on VM01.
- D. To run the set-vm cmdlet from Windows PowerShell Virtual Machine Manager.
- E. To modify the Buttons settings from Device Manager in VM01.
- F. To delete the mouse and restart VM01 from the VMM Administrator Console.

Answer: A

Question: 8

You work as an IT engineer in an international company which is named Wikigo. There are many servers in your company and you are in charge of a server named Host01 that has the Hyper-V server role installed. The server Host01 hosts three virtual machines and they are respectively named VMA, VMB, and VMC. Now you are assigned a task to make sure that the A occupy more CPU resources than VMB and VMC on Host01. Which option would you choose to accomplish this task?

- A. You should modify the quota points for VMA.
- B. You should modify the CPU reserve configuration for VMA.
- C. You should install and configure Windows System Resource Manager (WSRM) on Host01.
- D. You should modify the CPU reserve configuration for Host01.
- E. You should modify the hardware configuration for VMA.

Answer: E
